NMWC

Customer Master — Approval App

Supervisor User Guide

FOR SUPERVISORS

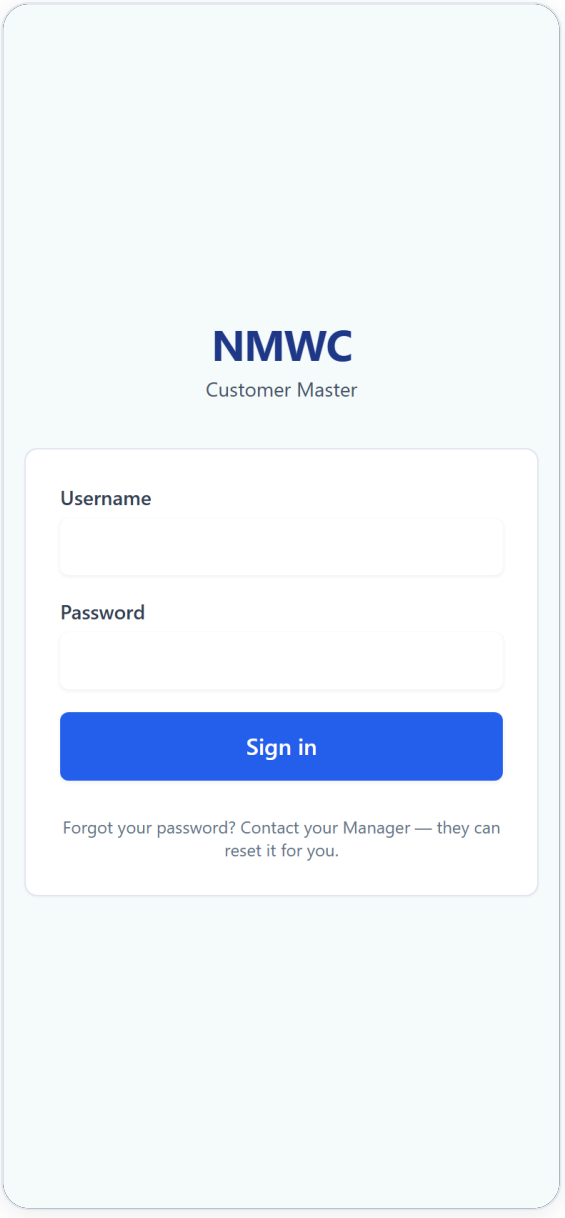

NMWC Customer Master · v1.0 · 2026-05

Welcome

You are the gate between field-collected data and the master record. Every salesman submission lands in your queue. Your job is to approve good ones quickly, reject bad ones with a clear reason, and use bulk actions when a batch is uniformly good. This guide walks you through every screen.

1. Logging in

1. Open **https://nmwc-cm.vercel.app** on your phone or laptop.

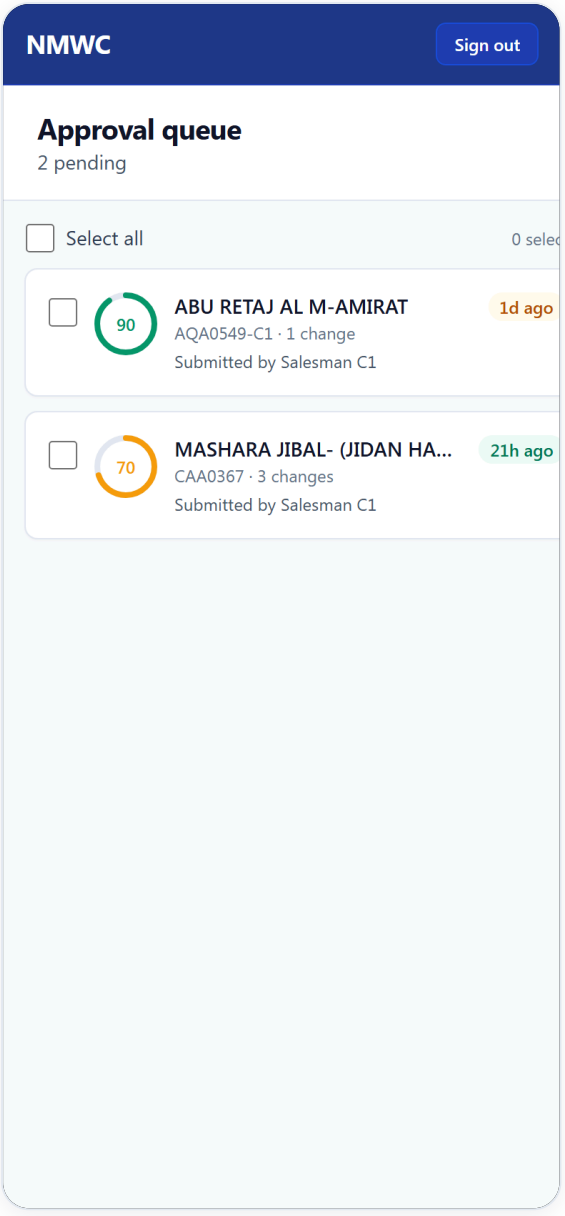

2. Sign in with your supervisor username and password.

3. After signing in you land on the Approvals page automatically.

2. Open the approval queue

1. Tap **Approvals** in the menu.

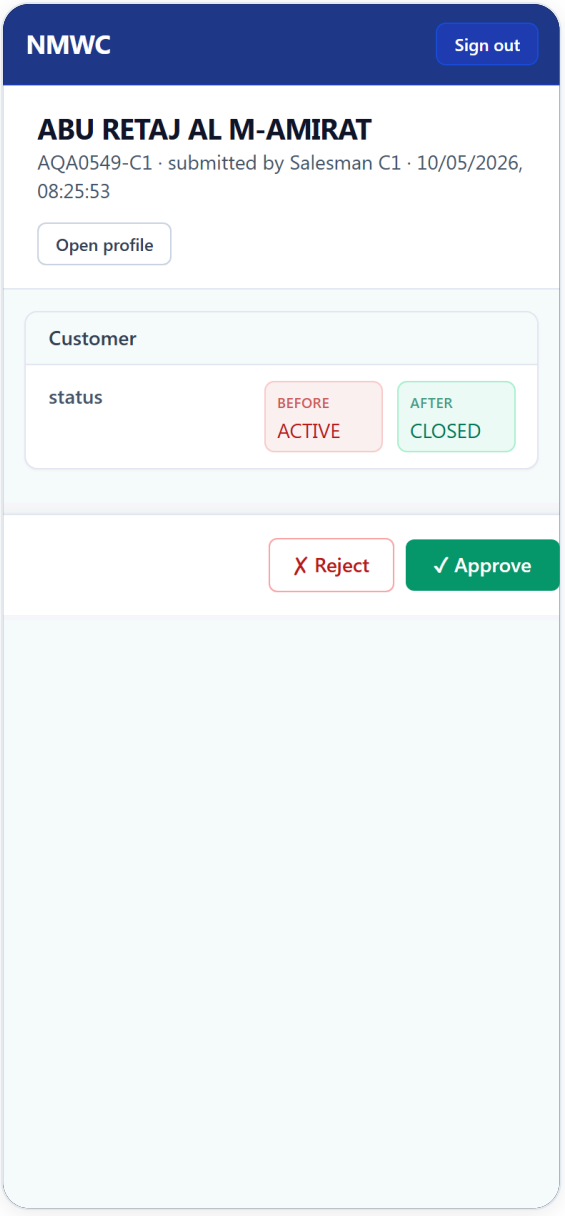

2. You see every pending submission from salesmen who report to you, oldest first.

3. Each row shows: customer name, NMWC code, number of changed fields, who submitted, and how long ago.

4 Age tags: **green** < 24h, **amber** 1-3 days, **red** > 3 days. Clear the reds first.

3. Review one edit (Before / After diff)

1. Tap any row to open the edit detail page.

2. You see a Before / After diff for every field that changed.

3. Compare the values. Anything wrong, missing, or suspicious?

4. If a photo changed, tap it to view full size.

5 Tap **Open profile** to see the full customer record (other fields, branches, history).

4. Approve, reject, or send back

✓ APPROVE

The change is correct. Tap the green **Approve** button. A confirmation popup asks you to confirm. The change goes live on the master immediately.

✗ REJECT (SEND BACK FOR CORRECTION)

Something needs fixing. Tap the red **Reject** button. Pick a category (Bad photo, Wrong GPS, Missing field, Wrong info, Other), pick a canned reason from the suggestion pills, or type your own (5+ letters). The salesman sees this exactly and can re-submit after fixing.

DON'T APPROVE YOUR OWN WORK

The system blocks you from approving your own submissions. If you ever submitted as a salesman first, that edit must go to another supervisor or to your manager.

5. Bulk approve / bulk reject

When a batch is uniformly good (or uniformly bad).

1. On the queue page, tick the checkbox next to each edit you want to handle. Use **Select all** to grab everything on the page.

2. A sticky bar appears at the bottom with **Approve N** and **Reject N** buttons.

3. **Bulk approve** runs each one in its own transaction. If a few fail (concurrent edits, missing fields), the others still go through. You see a clear list of which ones need attention.

4. **Bulk reject** sends the same category and reason to every selected edit. Use only when the issue is truly the same on all of them.

TIP — WHEN NOT TO BULK-APPROVE

If even one edit looks suspicious, open it and review individually. Bulk-approve is for trust + speed, not for skipping the check.

6. Reject categories — when to use which

Category	Use it when…
Bad photo	Photo is blurry, taken from too far, or doesn't show what it should (e.g. CR photo where the writing is unreadable).
Wrong GPS	GPS coordinates point to the wrong place — e.g. salesman captured GPS at the office instead of the shop.
Missing field	A required field is empty or has a placeholder.
Wrong info	A field has data that doesn't match the photo or what we know about the shop.
Other	Anything else — type a clear reason.

7. Common situations

Message you see	What it means
"Edit was just decided by another reviewer"	Another supervisor or manager approved/rejected before you. Refresh the queue.
"This value conflicts with an existing record"	Two salesmen submitted the same phone or CR number. Reject one and ask them to verify.
"Required fields are now missing"	Salesman deleted a required field (e.g. CR photo) between submitting and your approving. Reject — they need to re-upload at the shop.
"You are not authorized to act on this edit"	The customer is no longer in your team's scope (route reassigned, customer merged). Forward to your manager.

8. Print the credit application and the customer form

Since 11 October 2026. Every role except the salesman can print, within what it can already see; every print is recorded in the audit log.

1. A credit request of one of your salesmen goes to the Sales Director after you approve it. When the Sales Director approves, you get an alert, **Credit application to print**, and the request is listed under **Work items**.

2. Open it. The yellow note says the request is waiting for the salesman's signed application. Tap **Print credit application**: it opens in a new tab.

3. Tap **Print / Save as PDF**. The app records the print first, then opens the browser's print dialog. Choose A4 and untick **Headers and footers**. Print it, or save the PDF and send it to the salesman.

4. The salesman has the customer sign and stamp it and uploads it within 3 working days. The request then goes to the Finance Manager.

5. Every customer you can open has a **Print customer form** button on its page: both codes, the details, the location, the photos and documents, the approval trail and the approvers' signature boxes.

USE THE PRINT BUTTON

Printed with Ctrl+P or the browser menu, the page prints a notice instead of the form: only a print the button started is recorded. Print from a computer: printing from a phone or tablet has not been checked yet.

9. Quick reference card

Buttons

✓ **Approve**	Apply the change to the master.
✗ **Reject**	Send back to salesman with a category and reason.
Open profile	View the full customer record.
Approve N (sticky bar)	Bulk approve every selected edit.
Reject N (sticky bar)	Bulk reject every selected edit.

Triage by age

Green tag (under 24h)	Newest. Review when you can.
Amber tag (1-3 days)	Getting old. Aim to clear today.
Red tag (over 3 days)	Late — clear these first every morning.
