NMWC

Customer Master — Region App

Manager User Guide

FOR MANAGERS

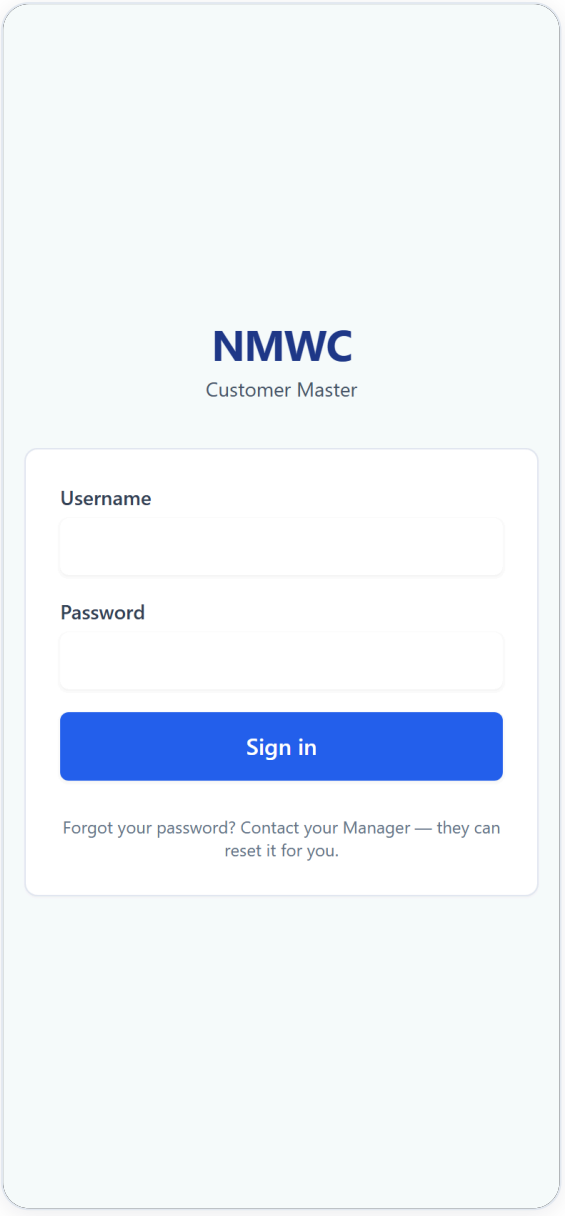

NMWC Customer Master · v1.1 · 2026-09

Welcome

You own the customer master in your region. Your salesmen report to you directly, so every update they submit comes to you for approval; you also approve reactivations of closed shops, manage your team's access (passwords, route assignments), keep an eye on data quality, and can download a report of exactly what the field force changed. This guide covers everything specific to your role.

1. Logging in

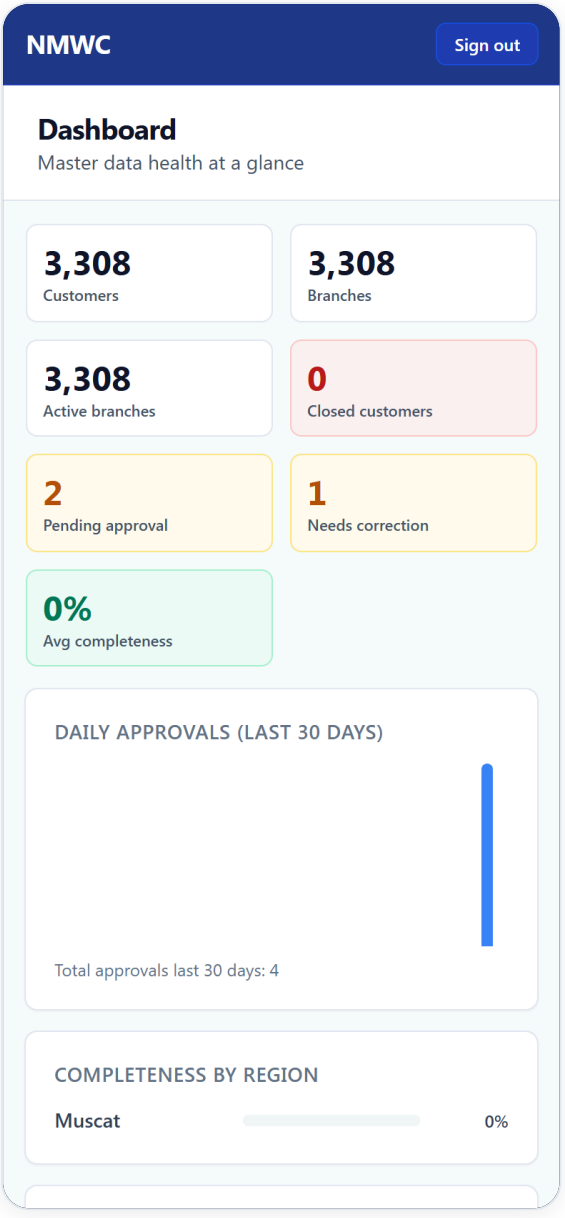

1. Open **https://nmwc-cm.vercel.app**.

2. Sign in with your manager credentials.

2. Daily dashboard check

1. Tap **Dashboard** in the menu.

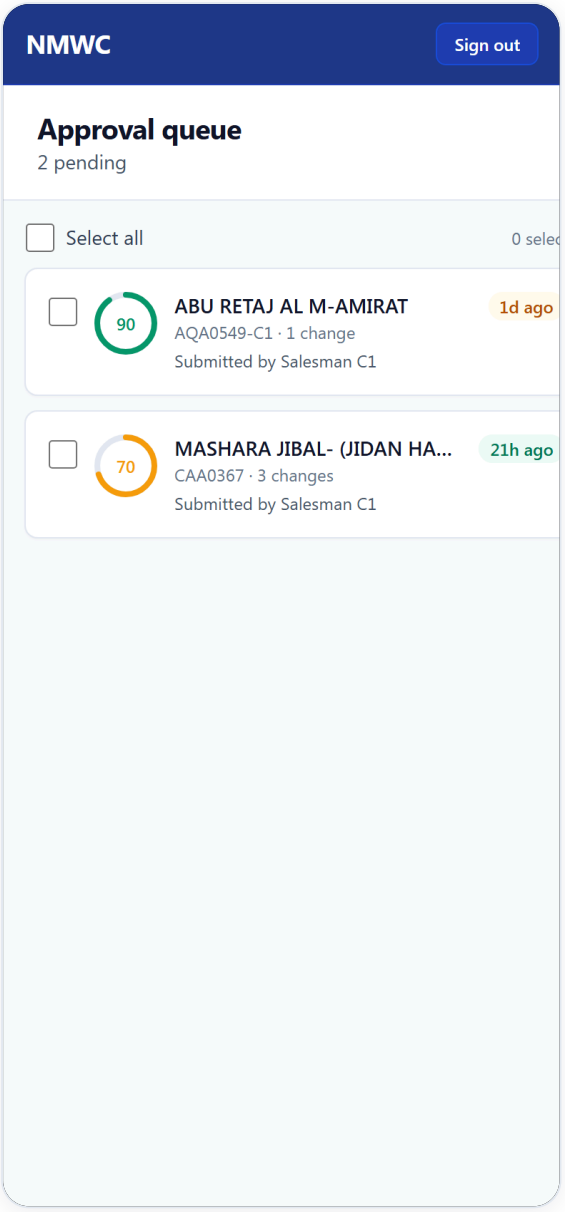

2. You see totals for your region: active customers, pending approvals, reactivation requests, recent activity.

3. Use it as a 30-second morning check before opening anything else.

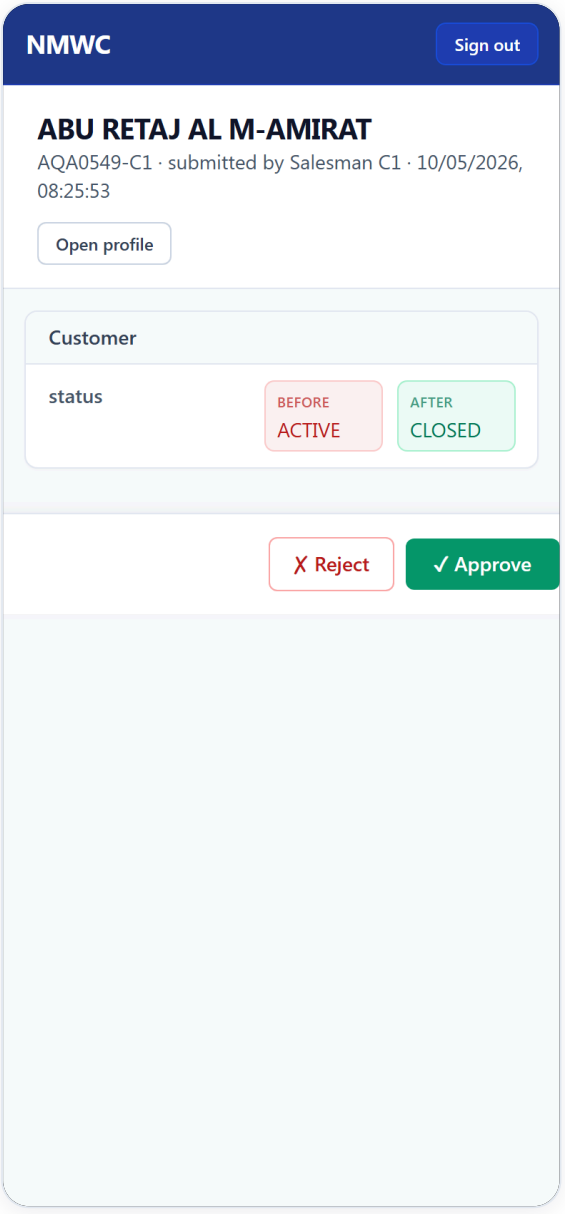

3. Approve your salesmen's updates

Since go-live (September 2026) there are no Supervisor accounts: every update a salesman submits for a customer in your region comes to you.

1. Tap **Approvals** in the menu. You see every pending submission from your region's salesmen, oldest first, with the number of changed fields, who submitted and how long ago.

2 Tap a row. You see a **Before / After** diff for every field that changed (channel names, not codes).

3 Below the diff, **Photos & location on file** shows the CR document, shop front, signboard and any extra photos — tap one to open it full size — and **Open in Google Maps** for the location on file and for the proposed location when it changed.

4 Tap ✓ **Approve** (a confirmation pops up) and the change goes live on the master immediately, or ✗ **Reject** with a category and a reason — the salesman sees it under *Needs correction* and re-submits after fixing.

CHECK THE PIN AND THE PHOTOS TOGETHER

Compare the map pin with the shop address and the shop-front photo. A manually entered location shows a **Manual** tag with the salesman's reason — make sure it is plausible before approving.

DON'T APPROVE YOUR OWN WORK

The system blocks you from approving anything you submitted yourself. Ask a peer manager.

4. Field-update report (Excel) — what was edited, what was not

1. Tap **Export** in the menu. In the **Field-update report** box pick the window (from / until) and tap **Download field-update report**. Region and route ticks above apply to it too.

2. Sheet **Customers**: every customer in your region, one row per branch. Each cell a salesman changed and you approved inside the window is **yellow** — hover it for the old value, who changed it and when. **Orange** cells carry a proposal not yet approved (the cell shows the current value). Cells with no colour were not touched.

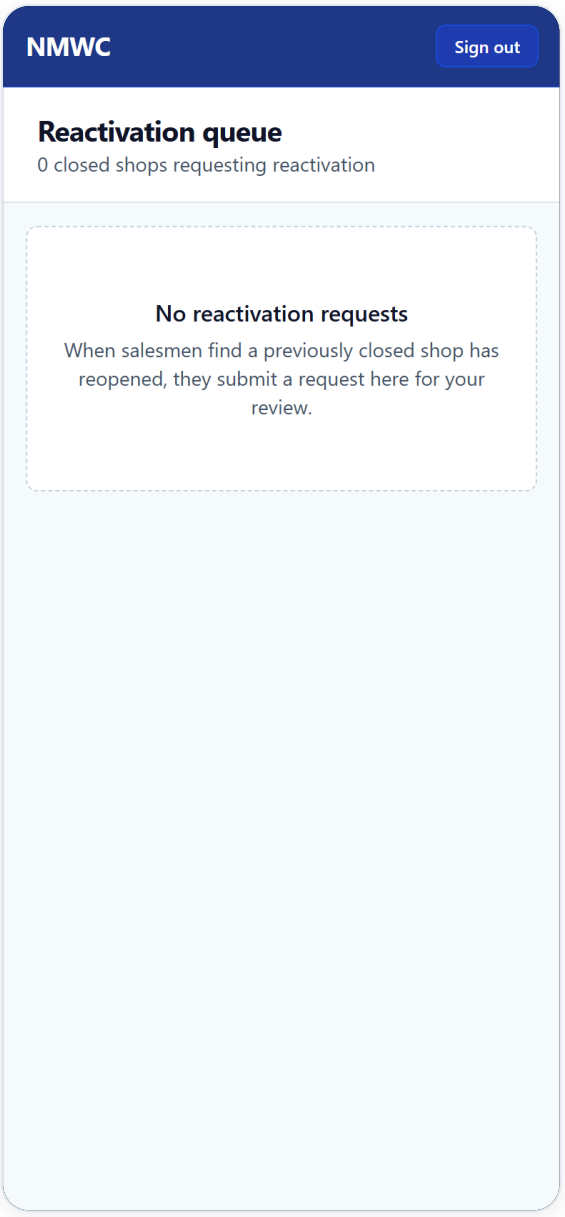

3. Sheet **Changes**: one row per change (before → after, submitted by, approved by, when). Sheet **By salesman**: per-salesman totals — customers updated, fields changed, photos added, GPS captured, still pending.

4. Tick **Only customers with changes** to drop the untouched rows.

5. Approve or reject reactivations

Reactivations bring closed shops back into the active master. Only managers can approve them.

1. Tap **Reactivations** in the menu.

2. You see all closed shops your salesmen have asked to reopen.

3. Each row shows the salesman's reason and the photo they captured today at the shop.

4. Tap the photo to see it full size and confirm the shop is genuinely open.

5. Tap ✓ **Reactivate** if you're satisfied — the branch goes back to ACTIVE.

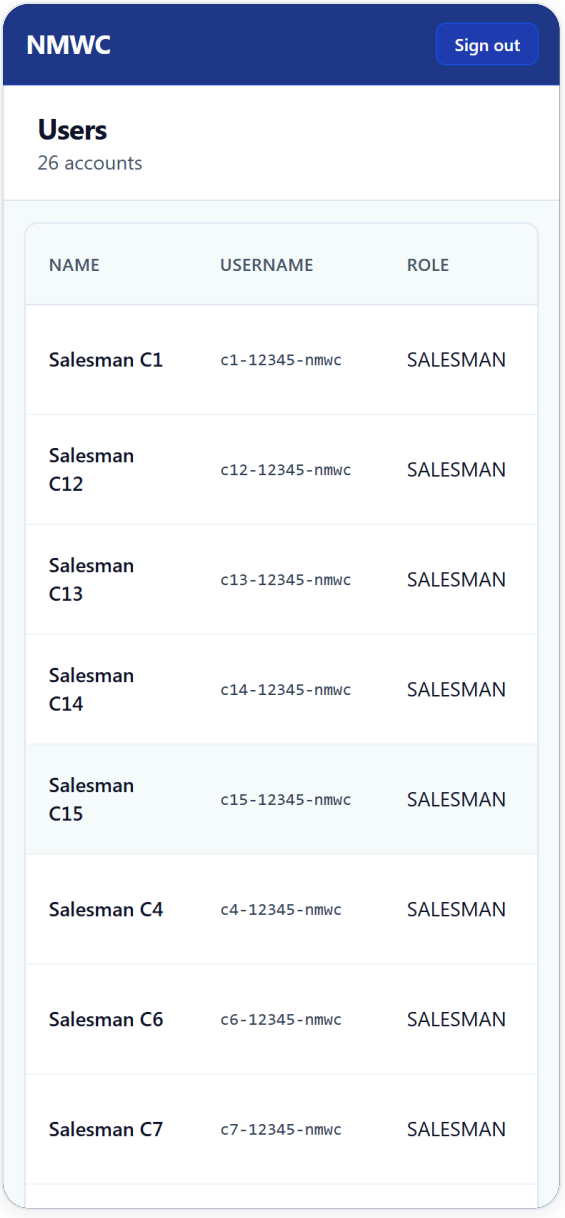

6. Tap **Keep closed** to reject. The salesman sees your decision.

PHOTO EVIDENCE FRESHNESS

The photo must be captured AFTER the shop was marked closed. The system rejects pre-closure photos automatically. If you see one that slipped through, reject the reactivation and ask the salesman to re-photograph.

6. Manage your team

1 Tap **Users** in the menu.

2 You see the users in your region: salesmen, supervisors, anyone reporting up to you. The list opens on the **Active** tab — the accounts that can be used. **Disabled** and **All** sit next to it, with the count of what the current tab is hiding shown under the title.

3 **Reset password** — for a salesman who forgot theirs. Set a temporary password; the system forces them to change it on next login.

4. **Disable** — when a salesman leaves the company. They can no longer log in. Their history stays in audit logs.

5. **Moving a route to another salesman** — there is no button for this. Send the Data Steward the route and the salesman who should own it. The Steward makes the change, which applies at once and takes the route off its previous salesman.

7. Routes and regions

1. Tap **Routes & regions** in the menu.
2. Add a new route, mark one inactive, see which salesman owns each route.
3. Routes belong to regions; you only manage routes in regions assigned to you.

8. Audit log — when investigating

Use this when something looks unusual or HR asks who did what.

1. Tap **Audit log** in the menu.

2. Every action by every user is logged: login, login fail, customer create/update, approval, reject, reactivation, photo capture, password reset, etc. Who opened a photo or document is recorded too, but only the Data Steward can see those rows: they never appear in your audit log.

3. Each row shows when, who, what action, on which record (its type and the start of its id), and the reason if one was given. The IP and the old and new values are recorded too, but this page does not show them; if an investigation needs them, ask head office.

4. Narrow it down by action type, by record type (Customer, Branch, User…), or by a record id: paste a customer's id — the part of its page address after `/customers/` — into **Entity ID contains…**. There is no filter by person or by date; the newest rows come first.

AUDIT LOGS ARE IMMUTABLE

Once written, no one — not even you, not the steward — can edit or delete an audit row. This is by design. It is the trustworthy paper trail for your region.

9. Common situations

Situation	What to do
A salesman says "Submit is greyed out"	The form lists what is still missing (photos, GPS, phone …). They can save a draft and finish at the shop. Nothing reaches you until it is submitted.
"Required fields are now missing on this customer"	A required photo was removed after the submit. Reject with "Missing field" so the salesman re-captures it and re-submits.
"Photo was captured before the last status change"	A salesman tried to use an old photo for a reactivation. Reject — they need to take a fresh photo at the shop today.
"My team can't log in"	Check Audit log for "LOGIN_FAIL" entries. Usually a typed password (system locks them out for 1 minute after 5 wrong tries).
"Cannot approve your own request"	You submitted the request originally. Forward to a peer manager.
"You have no managed regions assigned"	Your account hasn't been assigned a region yet. Contact head office.
Salesman moved to another route	Ask the Data Steward, with the route and the salesman who should own it. The change applies at once; the previous salesman no longer owns that route.
Salesman left the company	Disable on the Users page. Their audit trail is preserved.

10. Credit requests: print the application and the customer form

Since 11 October 2026 a credit request goes: Supervisor step (you) → Sales Director → the salesman's signed application → Finance Manager → GM → Accountant. Cash requests are unchanged.

1. Approve or reject the Supervisor step of a credit request as for any new customer. Check the customer's e-mail and the credit documents: the owner's ID card, the membership certificate, the VAT registration certificate and the tax card.

2. When the Sales Director approves, you get **Credit application to print** (it is also under **Work items**). Open the request and tap **Print credit application** in the yellow note.

3. Tap **Print / Save as PDF**: the print is recorded, then the browser's print dialog opens. Choose A4 and untick **Headers and footers**. Give the copy to the salesman.

4. The salesman uploads the signed and stamped application within 3 working days. If he is late, you are told.

5. Every customer page has a **Print customer form** button.

6. Every print is a **PRINT** row in the audit log.

USE THE PRINT BUTTON

Printed with Ctrl+P or the browser menu, the page prints a notice instead of the form: only a print the button started is recorded. Print from a computer: printing from a phone or tablet has not been checked yet.

DISABLING A SALESMAN WITH A REQUEST AT THAT STEP

Only he can upload the signed application or close the request. When you disable him, the app says so and asks again; confirm, and the request is withdrawn with the disable. A withdrawn request is closed for good, and its CR number and shop are free again.

11. Quick reference card

Manager-only actions

✓ Approve / ✗ Reject	Decide a salesman's update (Approvals).
✓ Reactivate	Bring a closed shop back to ACTIVE.
Keep closed	Reject a reactivation request.
Reset password	Generate a temporary password for a team member.
Disable user	Block a leaver from logging in.
Move a route	No button for it — ask the Data Steward.
Force override	Edit the master directly. Use sparingly — logged.

Where to look

Dashboard	Daily morning check. Region totals.
Reactivations	Closed shops asking to reopen.
Users	Your team. Passwords, status, route ownership.
Audit log	Every action taken in your region, except who opened photos and documents: that is recorded, but only the Data Steward sees it.
Approvals	Your salesmen's pending updates — review with photos and map, approve or reject.
Export	Customer master .xlsx and the field-update report (changes highlighted).
Service status	Whether the system keeps its promises: the app answering, approvals on time, the nightly backup. Approvals count the Supervisor step in your regions; the rest is company-wide. “Missed” means act.
